Strategic Career Roadmap – SWOC Analysis

SUBJECT CODE: EN25C09

STUDENT DETAILS

Student Name: INBA A

Roll Number: 26CS404

Class / Department: CSE C – Computer Science and Engineering

Academic Year: 2026–2027

Subject: EN25C09 – Professional English

Submitted as part of the Professional English Lab Integrated record.

1. Self-Introduction and Career Vision

Hi, I'm Inba A. I am a first-year Computer Science and Engineering student at St. Joseph's College of Engineering, Chennai. I am interested in programming, software development and emerging technologies. I enjoy learning how programs work and improving my logical thinking through coding practice.

Career Vision

My long-term goal is to become a capable software professional and build a career with opportunities to work with international teams or in a foreign country. I plan to develop strong technical fundamentals, gain practical experience, contribute to meaningful projects and continue learning throughout my career.

Technical Skills and Interests

I have started learning and practising C, C++, Java and Python. I am developing my programming knowledge step by step, with a focus on fundamentals, problem-solving, debugging and writing clear code. I am also interested in exploring data science and machine learning as I gain more experience.

Professional Online Profiles

GitHub	github.com/inbamagesh902-cpu
LinkedIn	Profile name visible in the supplied screenshot: **Inba magesh**. Paste your public LinkedIn profile URL here after copying it from your LinkedIn profile.

My Commitment

I will use learning resources and AI tools as assistants, but I will verify information, understand the code and practise independently. My aim is to build genuine skills rather than depend only on ready-made answers.

2. LinkedIn Profile

LinkedIn is a professional networking platform where students can present their education, skills, projects, achievements and career interests. A complete profile helps others understand my learning journey and may help me connect with mentors, recruiters and peers.

Suggested LinkedIn Headline

Headline

Suggested About Section

About

I am a first-year Computer Science and Engineering student at St. Joseph's College of Engineering. I am building my foundation in C, C++, Java and Python and improving my problem-solving skills through regular practice. I am interested in software development, data science and machine learning. I look forward to learning through projects, workshops, internships and collaboration with others. My long-term ambition is to contribute to technology projects in a global work environment.

Profile Sections to Complete

- Add a clear, professional profile photograph and a simple background banner.
- Check that the name and college details are accurate.
- Add education details: St. Joseph's College of Engineering, B.E. Computer Science and Engineering.
- List only skills that I can explain or demonstrate; mark developing skills honestly.
- Add genuine projects, certificates, workshops and achievements as I complete them.
- Copy the public profile URL and include it in this record.

Note: The screenshot shows the LinkedIn home feed and the profile name, but not the public profile URL. The URL is therefore left for me to add rather than guessed.

3. GitHub Profile

GitHub is a platform for storing code, managing projects and collaborating with other developers. It can act as a portfolio that shows my learning progress and practical work.

Suggested GitHub Bio

Bio

First-year CSE student | Learning C, C++, Java and Python | Interested in software development, data science and machine learning | Building projects and improving problem-solving skills.

Suggested Profile README

README introduction

Hi, I'm Inba A!
• First-year Computer Science and Engineering student
• Currently learning C, C++, Java and Python
• Interested in software development, data science and machine learning
• Working to improve problem-solving through coding practice
• Goal: build useful projects and learn collaboratively

My GitHub Improvement Plan

1. Create repositories for coursework and small practice programs.
2. Write a README file explaining each project, its purpose and how to run it.
3. Upload code that I understand and have tested; never upload passwords or private information.
4. Improve projects gradually and keep the repository organised.
5. Share completed projects on LinkedIn with a short explanation of what I learned.

4. Strategic Career Roadmap – SWOC Analysis

SWOC stands for Strengths, Weaknesses, Opportunities and Challenges. Strengths and weaknesses are internal factors that I can improve or manage. Opportunities and challenges are external factors that may influence my education and career.

STRENGTHS

- Interest in programming and technology
- Learning exposure to C, C++, Java and Python
- Willingness to learn and practise
- Curiosity about data science and ML

WEAKNESSES

- Beginner-level practical experience
- Need more confidence in solving unfamiliar problems
- Limited project and teamwork experience
- Need to improve communication and presentation

OPPORTUNITIES

- Online courses and student learning programmes
- Internships, hackathons and coding communities
- Open-source projects and global collaboration
- Future study or job opportunities abroad

CHALLENGES

- Rapid changes in AI tools and technology
- Competition for internships and entry-level jobs
- AI-generated answers may be incorrect or insecure
- Need to keep skills current and prove practical ability

A. Strengths

My main strength is my interest in computer science and my willingness to learn different programming languages. I have begun learning C, C++, Java and Python. I am curious about how software works and I am ready to practise regularly, ask questions and learn from mistakes. I also have an interest in data science and machine learning, which motivates me to explore new areas of computing.

B. Weaknesses

As a beginner, I do not yet have extensive real-world experience. I need more practice in data structures, algorithms, debugging, building complete projects and explaining my ideas confidently. I may find unfamiliar problems difficult at first. I will treat these as skills to develop, not permanent limitations.

C. Opportunities

I can use online courses, college workshops, coding clubs, hackathons, internships and open-source communities to gain experience. Working with students and developers from different countries can improve my technical and communication skills. With strong skills, projects and experience, I can aim for international study or employment opportunities in the future.

D. Challenges

AI platforms such as ChatGPT and other coding assistants are changing the way software is developed. They can help with learning, but their answers may contain mistakes, outdated information or insecure code. I must learn to verify AI output and understand the fundamentals. Other challenges include rapid technology changes, strong competition and the need to gain practical experience.

5. Action Plan – Turning Weaknesses into Growth

I will work on my weaknesses through consistent practice and feedback. My goal is to build skills step by step and show evidence of learning through projects.

Area	Action I will take	Evidence of progress
Programming basics	Practise one concept at a time in C, C++, Java and Python; focus on understanding rather than memorising.	Solved exercises and small programs
Problem-solving	Attempt beginner coding problems, write the logic first, then test and debug the program.	A regular practice record
Project experience	Build small projects such as a calculator, student record system or simple data analysis project.	GitHub repositories with clear READMEs
Communication	Explain one project or concept aloud and take part in class discussions or presentations.	Clearer explanations and feedback
AI awareness	Use AI for hints and explanations, verify its output, test code and make sure I can explain every line.	Independently understood and tested work
Career exposure	Attend workshops, join coding communities and apply for suitable student programmes or internships when eligible.	Participation, certificates and experience

A Simple Four-Year Direction

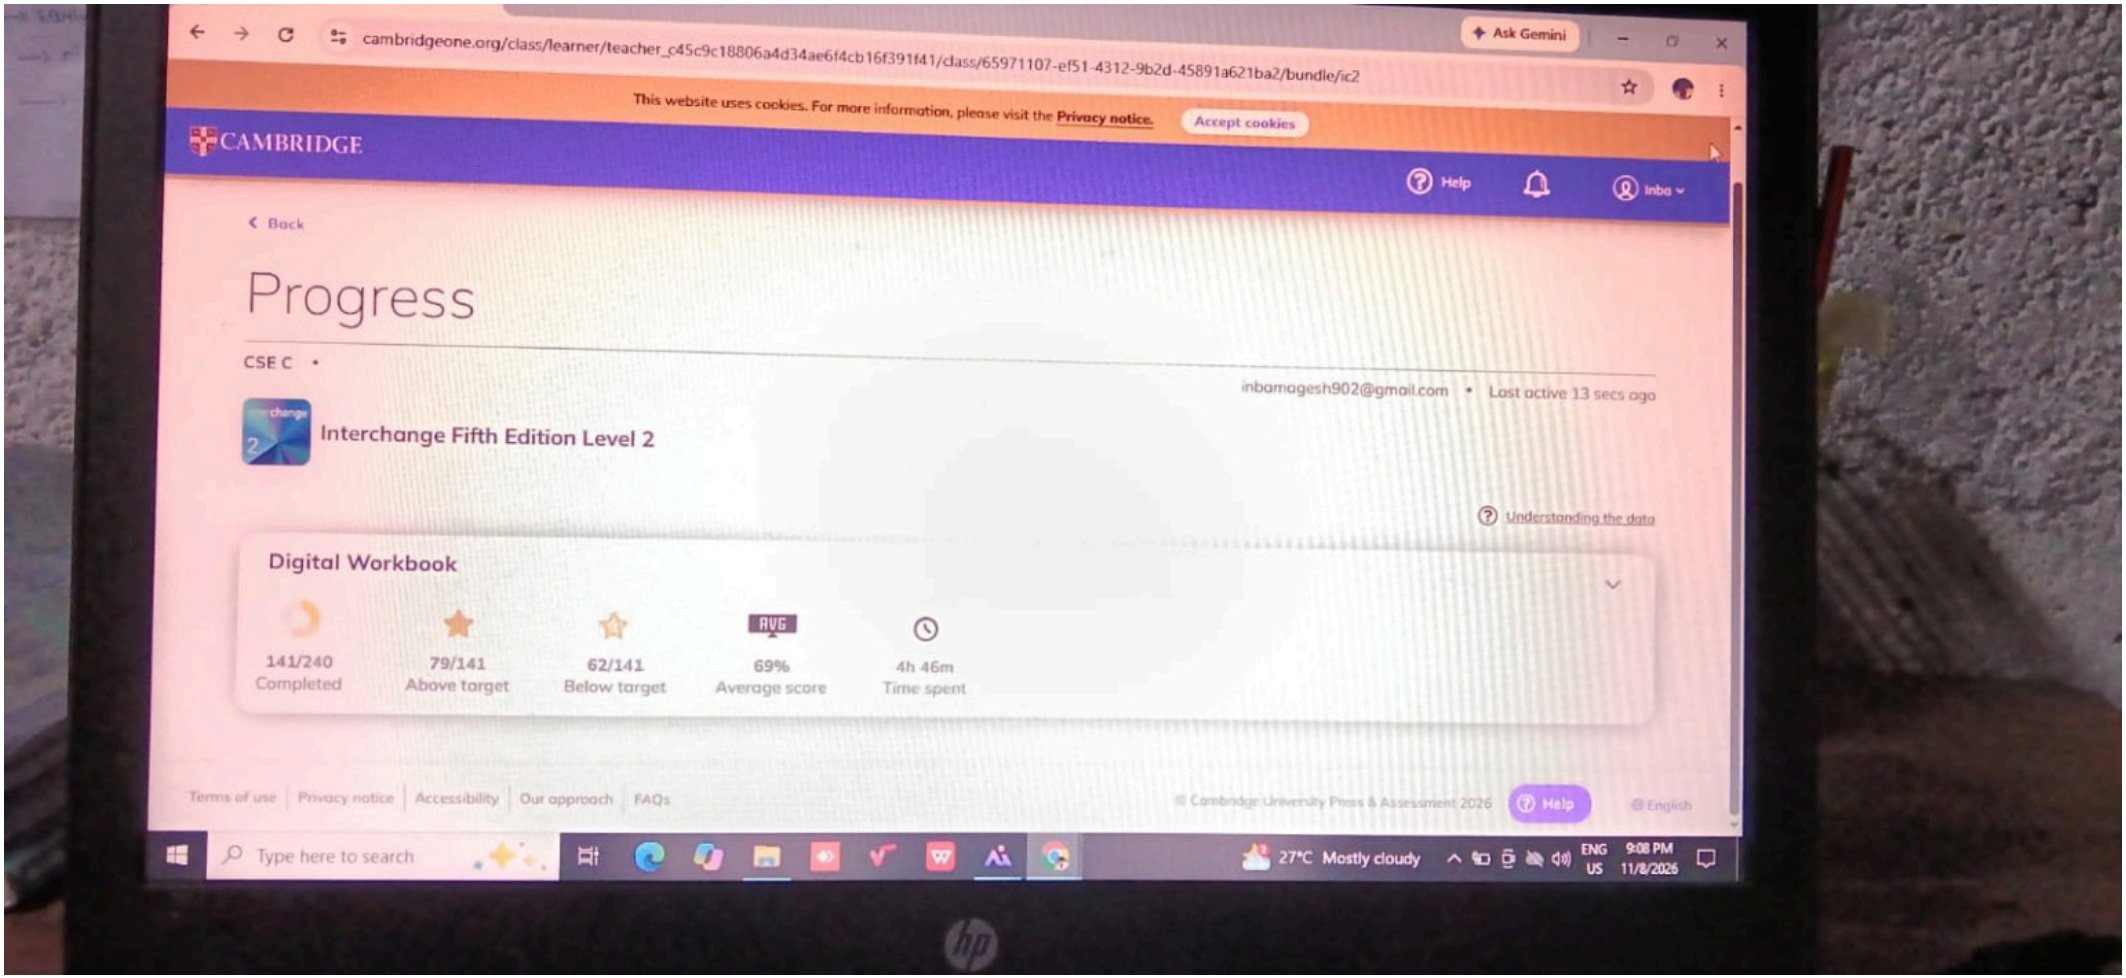

Year 1	Strengthen programming fundamentals, practise problem-solving and create beginner GitHub projects.
Year 2	Study data structures, algorithms and databases; work on team projects and explore internships.
Year 3	Choose a focus area, build more complete projects, contribute to communities and apply for internships.
Year 4	Prepare for placements or higher studies, present a strong portfolio and explore suitable international opportunities.

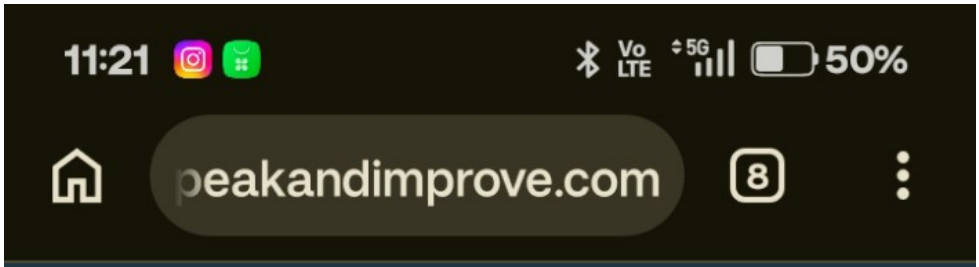

Conclusion

This SWOC analysis helps me understand my present abilities and the areas I need to improve. I may be at the beginning of my CSE journey, but regular practice, practical projects, communication and responsible use of AI can help me grow. I will focus on learning the fundamentals, gaining experience and preparing myself for future opportunities in India and abroad.

“Learn continuously, practise consistently and use technology responsibly.”
