ST. JOSEPH'S COLLEGE OF ENGINEERING

(An Autonomous Institution) • OMR, Chennai - 119

LAB RECORD

Professional English Lab Integrated

CLASS CODE: EN25C09

STUDENT DETAILS

Student Name: _____

Roll No: _____

Date: _____

Subject Name: _____

DEPARTMENT OF HUMANITIES & SCIENCES • AFFILIATED TO ANNA UNIVERSITY • CHENNAI

Impressive Personality: Jeff Bezos

Entrepreneur and technology leader whose approach to customer focus and long-term thinking is inspiring.

AREA	DETAIL
Full name	Jeff Bezos
Known for	Founder of Amazon and Blue Origin
Key qualities	Long-term thinking, customer focus, experimentation and willingness to take calculated risks
Why relevant to me	His approach shows how technology, disciplined execution and continuous improvement can scale an idea into a large organisation.

Why He Inspires Me

Jeff Bezos inspires me because of his long-term approach to building technology and his focus on improving the customer experience. His career demonstrates the importance of thinking beyond short-term results, experimenting with new ideas and learning from failures. As I work toward AI and Software Quality Assurance, I want to develop the same habit of looking for better ways to solve problems and improve reliability.

Customer Focus

Understand the user and build software that solves real problems.

Long-Term Thinking

Develop skills and projects that create value beyond a single assignment.

Experimentation

Try ideas, measure results and improve based on what is learned.

MY TAKEAWAY

Think long term. Keep learning. Experiment intelligently. Build useful technology and keep improving it.

Profile & Direction

A concise view of who I am, what I am learning and where I want to go.

I am a B.E. Computer Science and Engineering student building a strong foundation in programming and software development. I am currently learning C programming and plan to strengthen my skills with Python in the future. My career interest is at the intersection of Artificial Intelligence and Software Quality Assurance, where I want to use technology to build software that is both intelligent and reliable.

Snapshot

AREA	CURRENT DIRECTION
Current study	B.E. Computer Science and Engineering – St. Joseph's College of Engineering, Chennai
Current learning	C programming and core programming fundamentals
Future learning	Python, AI concepts and practical software development
Operating system	macOS
Career direction	AI + Software Quality Assurance
Interests	Automation testing, Selenium, API testing, web development and reliable software

Personal Strengths

Problem Solving

I enjoy understanding problems step by step and looking for practical solutions.

Adaptability

I am open to learning new tools and technologies as my technical skills grow.

Quality Mindset

I am interested in finding issues early and improving software reliability.

Continuous Learning

I want to build a strong foundation first and then progress toward AI and automation.

Career SWOC Analysis

A personal analysis of the AI + Software Quality Assurance career path.

STRENGTHS

Combines problem solving, software development, testing and emerging AI skills. QA is valuable across many software products, while AI can add intelligent assistance to testing.

WEAKNESSES

The field requires a strong foundation in programming, testing concepts, tools, APIs and software development practices. Building depth takes consistent practice.

OPPORTUNITIES

AI-assisted testing, test automation, quality engineering, API testing, intelligent defect analysis and AI-based developer tools are promising areas to explore.

CHALLENGES

AI tools and testing technologies evolve quickly. It is important to verify AI-generated results, understand false positives and maintain good testing judgement.

Career Path Roadmap

STAGE	FOCUS
FOUNDATION	C programming, problem solving, computer science basics and software fundamentals.
PROGRAMMING	Learn Python and build small automation scripts and applications.
QA PRACTICE	Learn test case design, bug reporting, API testing and Selenium automation.
AI LAYER	Learn basic AI/ML concepts and explore AI-assisted testing workflows.
SPECIALISE	Move toward AI-powered QA, test automation, quality engineering or intelligent testing tools.

Write and Improve

Building clear, correct and confident written communication through regular practice.

My Writing Practice

Writing helps me organise my thoughts and communicate ideas in a clear way. As a Computer Science student, I need to explain concepts, describe problems and present information in a structured manner. I will improve my writing by practising short paragraphs, checking grammar and vocabulary, and rewriting my work after reviewing mistakes.

Practice Activity: A Short Self-Introduction

First draft

I am a computer science student. I am learning C programming. I like technology and I want to learn more about artificial intelligence and software quality assurance. I want to improve my communication skills.

Improved version

I am a Computer Science and Engineering student who is building a strong foundation in programming. I am currently learning C and hope to explore Python, Artificial Intelligence and Software Quality Assurance. Along with my technical knowledge, I want to strengthen my communication skills so that I can express ideas clearly and confidently.

What I Improved

Sentence structure	Connected related ideas and made the paragraph flow more naturally.
Vocabulary	Used more precise words such as “foundation”, “explore” and “strengthen”.
Clarity	Removed repetition and made the purpose of each sentence clearer.
Grammar	Checked capitalisation, punctuation and complete sentence formation.

My Improvement Plan

I will read my writing once for meaning and again for grammar. I will use simple and accurate vocabulary, avoid unnecessarily long sentences, and revise my first draft before submitting written work.

Speak and Improve

Developing confidence, pronunciation and fluency through planned speaking practice.

My Speaking Practice

Speaking clearly is important in classroom discussions, presentations and future professional situations. I want to become more confident when expressing my thoughts in English. I will practise speaking aloud, organise my points before speaking and focus on a steady pace rather than speaking too quickly.

Practice Activity: One-Minute Self-Introduction

Good morning. My name is J Gracie Infancia. I am pursuing B.E. Computer Science and Engineering at St. Joseph's College of Engineering, Chennai. I am currently learning C programming and developing my problem-solving skills. I am interested in Artificial Intelligence and Software Quality Assurance. In the future, I would like to learn Python, explore automation and build useful technology projects. I also want to improve my communication skills and become a confident learner. Thank you.

How I Will Improve

Pronunciation	Read short passages aloud and pronounce words carefully.
Fluency	Speak for one minute on a familiar topic without stopping frequently.
Confidence	Practise in front of a mirror and gradually speak in small groups.
Voice and pace	Speak at a moderate speed and use pauses between ideas.
Body language	Maintain a natural posture, eye contact and suitable facial expressions.

My Reflection

I can improve my speaking by practising regularly instead of waiting until a presentation or discussion. Recording my voice and listening to it will help me notice unclear pronunciation, repeated words and areas where I can speak more naturally.

Soft Skills Coursework

Learning themes based on the NPTEL course summary provided.

Course: Enhancing Soft Skills and Personality
Course Code: 109104115
Instructor: Prof. T. Ravichandran
Institution: IIT Kanpur

Course Objectives

- Improve communication skills.
- Develop a positive attitude and personality.
- Build confidence and interpersonal skills.
- Learn effective time management.
- Understand emotions and emotional intelligence.
- Develop professional and workplace skills.
- Improve English language and presentation skills.

Important Topics

- Soft skills and personality development
- Communication skills
- Time management and procrastination
- Assertiveness
- Emotional intelligence
- Interpersonal skills
- English language skills
- Workplace etiquette and professional behaviour
- Ethics and values
- Health and well-being

Personal Takeaway

The course highlights that technical knowledge alone is not enough for academic and professional success. Communication, confidence, interpersonal skills, emotional control and professional behaviour are also important. For an AI and QA career, these skills can help me explain technical issues clearly, work with a team, present test findings and communicate solutions professionally.

Project Ideas

Practical projects I can build as my C, Python, QA and AI skills develop.

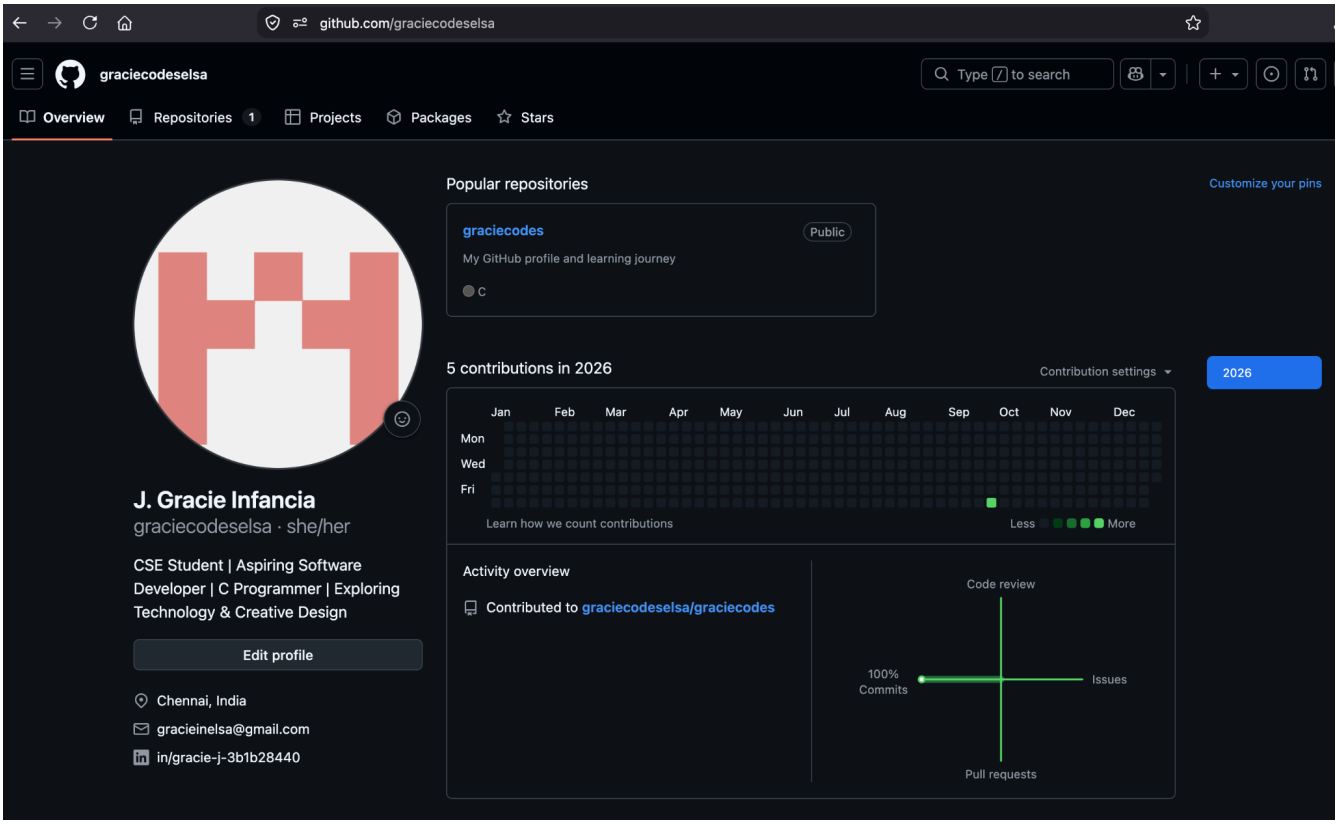

PROJECT	IDEA	SKILLS
AI Test Case Generator	A tool that accepts a feature description and suggests positive, negative and edge-case test scenarios.	Python, AI, QA
Smart Bug Classifier	Classify bug reports into categories such as UI, functional, API and performance and generate a short summary.	Python, AI, QA
Website Test Automation Suite	Automate login, navigation, form validation and important user flows for a sample website.	Python, Selenium, QA
API Health Checker	Run API checks, validate status codes and response fields, and produce a simple test report.	Python, API, QA
Visual Regression Checker	Compare two webpage screenshots and highlight significant visual changes.	Python, image processing, QA
Student Task Testing Dashboard	A small dashboard showing test status, defects, priority and completion trends for a sample project.	Web, QA, data

First Project

To start with a simple Website Test Automation Suite. It provides a practical bridge between programming fundamentals and QA. After becoming comfortable with Python and Selenium, the project can be extended with API testing, reporting and AI-assisted test generation.
