Self Introduction – Written Script & One Page Profile

I’m Ezhil Josanta X, a first-year Computer Science Engineering student at St. Joseph College of Engineering, Chennai.

I’m currently building my programming foundation through C, and I’m also exploring Python and Artificial Intelligence because my goal is to become an AI Engineer.

What interests me most about AI is its ability to solve real-world problems. One idea I would like to explore in the future is a biometric voting system using fingerprint authentication, with the aim of making the voting process more secure and reliable.

I would describe myself as a consistent learner, curious, and adaptable. I may be at the beginning of my technical journey, but I’m ready to learn, experiment, build projects, and improve continuously.

My long-term goal is to gain strong knowledge in computers, data, and AI and use those skills to create solutions that have real-world impact.

Thank you**.**

Impressive Personality – Biographical Note

Biographical Note: Dr. Pratyush Kumar — An Inspiration in Artificial Intelligence

Dr. Pratyush Kumar is an Indian artificial intelligence researcher and entrepreneur who has made significant contributions to the development of AI technologies, particularly for Indian languages. He completed his B.Tech in Electrical and Electronics Engineering at the Indian Institute of Technology (IIT) Bombay and earned his Ph.D. in Computer Engineering from ETH Zurich, Switzerland, in 2014.

His professional career includes research experience at IBM Research and Microsoft Research, along with an academic role at IIT Madras. His work combines scientific research, engineering, and practical technology development.

In 2020, he co-founded AI4Bharat, an initiative focused on developing open-source datasets, tools, and AI models for Indian languages. In August 2023, he co-founded Sarvam AI with Dr. Vivek Raghavan. The company aims to develop advanced AI models and applications designed around India's linguistic diversity and technological needs.

Dr. Kumar's career demonstrates how strong academic foundations, research experience, and entrepreneurial thinking can come together to address real-world challenges. His work highlights the importance of developing AI systems that serve diverse communities rather than limiting innovation to existing global applications.

For aspiring AI engineers, his journey offers valuable lessons in continuous learning, technical depth, problem-solving, and purposeful innovation. His professional path illustrates how computer science graduates can progress from mastering engineering fundamentals to conducting research and building technology products with meaningful societal impact.

Career Inspiration: Dr. Pratyush Kumar represents a path in which technical expertise, research, and entrepreneurship combine to help shape India's artificial intelligence ecosystem

SWOC Analysis & Presentation Script

COLLEGE / DEPARTMENT / BATCH / YEAR:

St. Joseph College of Engineering, Chennai

B.E./B.Tech CSE | 2026–2030 | 1st Year

TARGET ROLE:

AI Engineer

LONG-TERM GOAL:

To learn deeply about computers, data, and Artificial Intelligence, and use my knowledge to solve real-world problems through meaningful projects.

SKILLS

- C Programming – Beginner, currently learning

- GitHub – Basic usage

- LinkedIn – Basic usage

- Python – Interested and planning to learn

- AI/ML – Future learning goal; not yet started

PROJECTS

I am currently building my programming fundamentals and plan to develop my first technical projects as I progress through college.

CERTIFICATIONS DONE / PLANNED

- SWAYAM – Basics of Computer – Currently learning

- Plan to pursue relevant NPTEL/SWAYAM certifications during college

- Plan to pursue AI/ML-related certifications as I build the required fundamentals

PROFILES

GitHub:

https://github.com/ezhiljosanta

LinkedIn:

https://www.linkedin.com/in/ezhil-josanta-763042440

Email:

ezhiljosanta@gmail.com

CURRENTLY LEARNING

- C Programming

- Programming fundamentals

- Exploring the path toward Artificial Intelligence

- Interested in learning Python

- Interested in participating in hackathons

SWOC ANALYSIS

STRENGTHS

1. Consistent Learner

I am continuously learning C as a beginner and working on strengthening my programming fundamentals.

2. Curious

I am curious about Artificial Intelligence and interested in understanding how AI can be used to solve real-world problems.

3. Adaptable

As a first-year CSE student, I am open to learning new technologies and gradually exploring areas beyond my current programming knowledge.

WEAKNESSES

1. Beginner-Level Technical Skills

My programming skills are currently at a beginner level.

Fix: Practice C regularly, strengthen problem-solving fundamentals, and gradually start learning Python.

2. Limited Project Experience

I have not yet completed a major technical project.

Fix: Start with small projects, build my GitHub portfolio, and participate in hackathons as I gain more skills.

OPPORTUNITIES

1. SWAYAM / NPTEL

Use online courses and certifications to strengthen computer science fundamentals.

2. Hackathons and Ideathons

Gain practical experience by working on real-world problems and collaborating with other students.

3. GitHub and Open Source

Build a public portfolio by uploading projects and gradually contributing to open-source projects.

4. CSE Clubs and Technical Communities

Learn from seniors, collaborate with peers, and gain exposure to new technologies.

CHALLENGES

1. Fast-Changing AI Field

AI technologies are developing rapidly, so continuous learning will be necessary.

Approach: Follow a structured learning path and focus on strong fundamentals rather than trying to learn every new tool.

2. Limited Experience

As a first-year student, I currently have limited programming and project experience.

Approach: Build skills step-by-step through practice, small projects, hackathons, and collaboration.

4-YEAR PLAN

Year| Focus| Deliverable| Credential

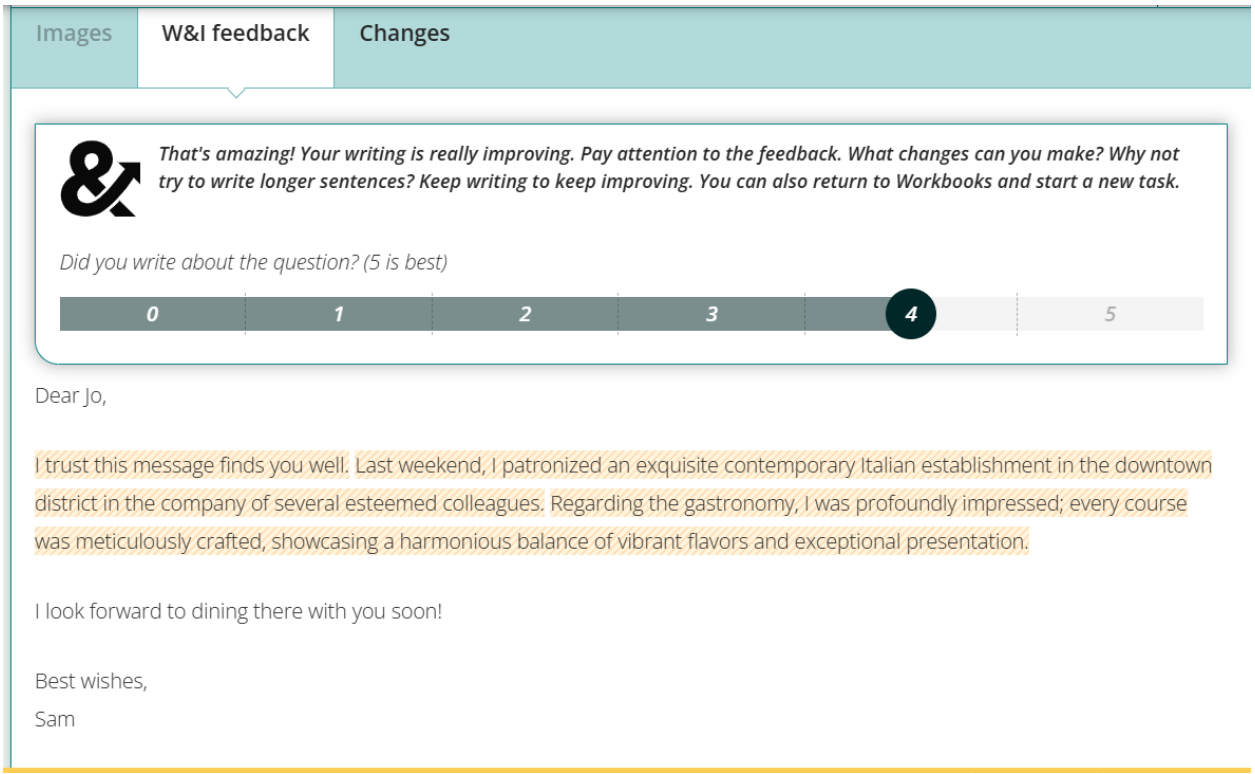

1st Year| C fundamentals, Python basics, GitHub and problem solving| 2–3 small projects/programs| SWAYAM/NPTEL if completed

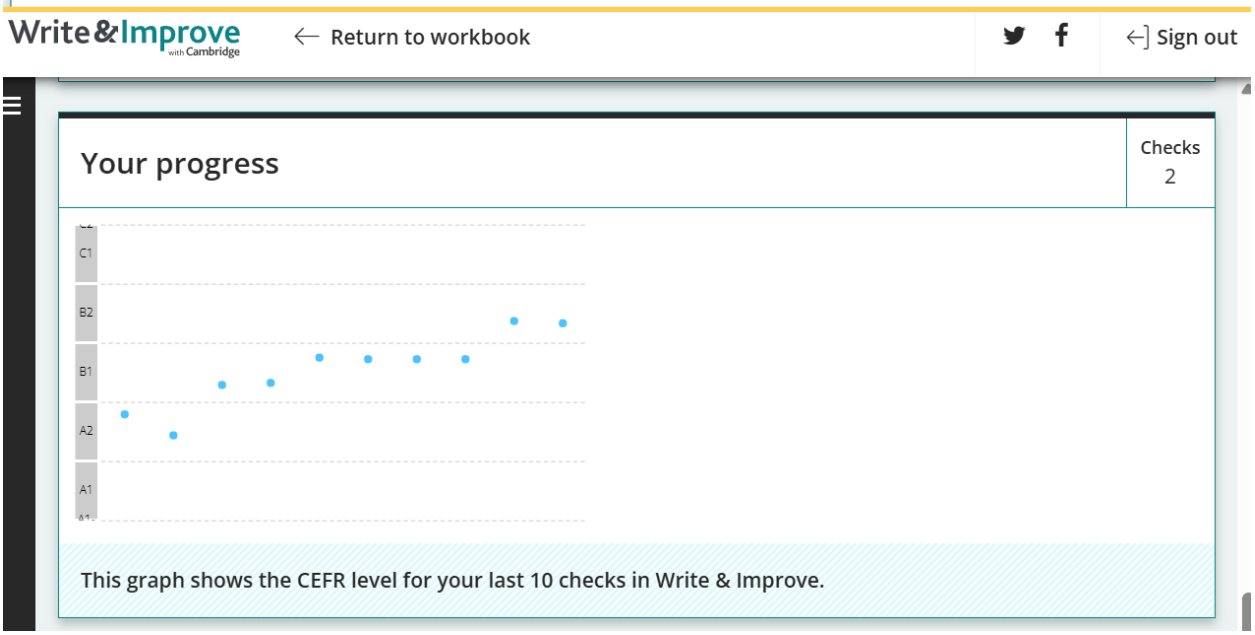

2nd Year| Python, DSA, SQL and AI/ML fundamentals| 2–3 meaningful projects| Relevant technical certification

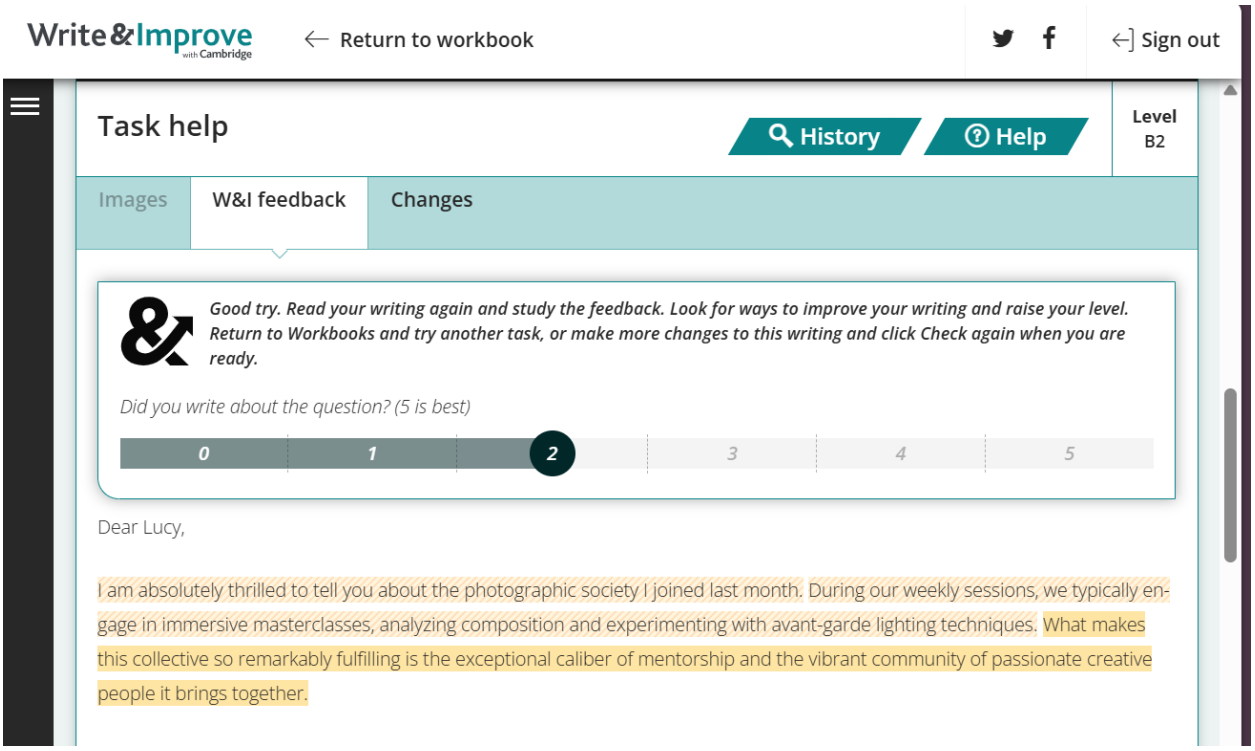

3rd Year| AI/ML, advanced projects, hackathons and internships| Strong AI project + practical experience| AI/ML certification

4th Year| AI specialization, major project and placement preparation| Final-year AI project + strong portfolio| Relevant certification / placement credentials

Dear Lucy,
I am absolutely thrilled to tell you about the photographic society I joined last month. During our weekly sessions, we typically engage in immersive masterclasses, analyzing composition and experimenting with avant-garde lighting techniques. What makes this collective so remarkably fulfilling is the exceptional caliber of mentorship and the vibrant community of passionate creative people it brings together.

Worksheet 1 – Part C (5 × 13 = 65 Marks)

Question 26 (a) Safety instructions for safe and responsible use of the internet

1. Use a strong, unique password of at least twelve characters, mixing letters, numbers and symbols, for every account.
2. Enable two-factor authentication on your email, banking and social media accounts.
3. Do not click on links or open attachments from unknown or suspicious senders.
4. Never share personal details such as OTPs, passwords, Aadhaar or bank details with anyone online.
5. Check that a website address begins with "https" and shows a padlock before entering any sensitive information.
6. Keep your operating system, browser and antivirus software updated at all times.
7. Avoid banking or shopping on public Wi-Fi; use a trusted VPN if you must connect.
8. Report cyberbullying, online fraud and phishing attempts immediately to a trusted adult, the platform, or the National Cyber Crime Helpline (1930).

Question 27 (a) Descriptive essay: A traditional art form in my region and how modern initiatives can preserve it

Selected Question: 27.a

Bharatanatyam: The Dance That Carries Tamil Nadu's Soul

Among the many traditional art forms of Tamil Nadu, Bharatanatyam is the one that has carried our culture across the centuries. It began inside the temples, where devadasis performed it as an offering to the deity. The epic Silappathikaram describes classical dance in detail, and the carvings on the Brihadeeswarar Temple at Thanjavur and the Chidambaram Nataraja Temple show its postures in stone. In the nineteenth century, the Thanjavur Quartet organised the repertoire into the form we see today.

Traditionally, a dancer trains for many years under a guru. A performance blends nritta (pure rhythm), nritya (expressive storytelling) and natya (drama), told through hand gestures called mudras, facial expressions and Carnatic music. The dancer wears a bright silk costume, temple jewellery and ankle bells called salangai. The first full solo performance, the arangetram, marks the end of a student's formal training.

Today, many young people feel the art form is old-fashioned and too expensive to learn. Modern initiatives can change this. Schools and colleges can include classical dance in cultural clubs and the curriculum, as institutions like Kalakshetra in Chennai already do. Online classes, recorded performances and social media reels can reach learners in small towns. Festivals such as the Margazhi season in Chennai give young artists a stage, and scholarships can help families who cannot afford training.

Bharatanatyam is more than entertainment; it is a living record of our history, music and devotion. If we support it through education, technology and public platforms, the next generation will carry the dancing bells forward.

Question 28 (b) Formal letter of request to the Principal

Selected Question: 28.b

Inba Ilakiyan
I Year, B.E. Computer Science and Engineering
St. Joseph's College of Engineering
OMR, Chennai – 600 119
1 November 2026

To
The Principal
St. Joseph's College of Engineering

OMR, Chennai – 600 119

Subject: Request for permission to attend a technical workshop on Artificial Intelligence and Emerging Technologies

Respected Sir/Madam,

I am a first-year B.E. Computer Science and Engineering student of your college. I have come to know that [Name of Institution] is organising a one-day technical workshop on Artificial Intelligence and Emerging Technologies on [date]. I request your kind permission to attend this workshop.

My objective in attending is to learn how artificial intelligence is applied in real engineering problems and to gain hands-on exposure to tools that are not covered in detail in our first-year syllabus. I also hope to meet experts and students from other institutions and learn from their experience.

I expect to learn the basics of machine learning, practical uses of AI in software and cloud systems, and the latest trends in emerging technologies. After the workshop, I will share the notes and key points with my classmates and use what I learn in my Python projects.

I request you to kindly grant me on-duty leave for the day of the workshop and permit me to travel to the venue. I will make up for any classes missed and will submit the participation certificate to the department after the workshop.

I would be grateful if you could grant me this permission.

Thank you for your kind consideration.

Yours obediently,
Inba Ilakiyan
(Register No.: [Register No.])

Question 29 (a) Analytical essay: AI-based assessment versus traditional teacher-based assessment

Selected Question: 29.a

AI-Based Assessment versus Traditional Teacher-Based Assessment in Engineering Education

Assessment decides how students learn, so the choice between AI-based and teacher-based methods matters in engineering education. Each has clear strengths and weaknesses.

In terms of accuracy, AI tools are consistent. An automated system can evaluate hundreds of code submissions or objective answers using the same rules every time, without getting tired. Teachers, on the other hand, can understand a student's reasoning in a long derivation or a design report, which software often misses. Therefore, AI is accurate for objective answers, whereas teachers are better for open-ended ones.

Feedback time is where AI wins most clearly. Students receive results and error explanations within seconds, while manual evaluation of a large class may take weeks. Quick feedback lets students correct their mistakes while the topic is still fresh. Conversely, a teacher's comments arrive more slowly but are usually more personal and motivating.

Regarding fairness, AI does not show favouritism or mood-based marking. However, it can carry hidden bias from the data it was trained on, and it may penalise students who give unusual but valid solutions. A teacher can notice such cases and adjust the marks.

Finally, human judgement remains important. Engineering involves creativity, ethics and teamwork, which cannot be reduced to a score.

In conclusion, neither method is perfect alone. The best approach is a blend, where AI handles routine and objective checking quickly, and teachers review complex work and guide students. This combination keeps assessment fast, fair and meaningful.

Question 30 (b) Personal email: Orientation programme

Selected Question: 30.b

To: [friend's email address]

Subject: My first-year orientation programme at college

Dear [Friend's name],

How are you? I hope you are doing well and enjoying your college life too. I have been wanting to write to you about my orientation programme, so here it is.

The programme was held for the first-year engineering students at our college. It began with a welcome address by the Principal, followed by talks from senior faculty and some alumni. We also had fun icebreaker games and team activities, which helped me make new friends within the first day itself.

The best part was the tour of the academic facilities. We visited the library, the computer labs, the workshops and the seminar halls, and the staff explained how to use each of them. We were also told about the college rules on attendance, discipline, dress code and examinations, so now I know exactly what is expected from us.

Overall, the programme made me feel much more comfortable in the new environment. I understood how college life works and how to plan my studies, and I felt ready to start my academic journey with confidence.

Write back soon and tell me about your college too. Take care!

Your friend,
Inba

Worksheet 2 (Model – I Practice Worksheet) – Exercises 1 to 15

Exercise 1: Simple Present Tense (Subject-Verb Concord)

1. recognize
2. requires
3. transmit
4. agrees
5. form

Exercise 2: Simple Past Tense

1. conducted
2. deployed
3. opened
4. published
5. detected

Exercise 3: Comparative Adjectives

1. higher
2. safer
3. faster
4. more durable
5. lower

Exercise 4: Modals of Obligation and Necessity

1. must
2. must
3. have to
4. must
5. has to

Exercise 5: Modals of Capability and Possibility

1. can
2. may
3. can
4. can
5. can

Exercise 6: Relative Clauses

1. The civil engineer who designed the suspension cable bridge received the national infrastructure award.
2. The spectrometer, which analyzes infrared emission spectra, is mounted inside the cleanroom vacuum chamber.
3. The technical specialist whose patent on pneumatic grippers was approved was reassigned to the robotics lab.
4. This microcontroller, which features ultra-low power sleep states, is ideal for battery-operated remote sensors.
5. The field researchers who surveyed the wind turbine farm submitted their acoustic emission assessment yesterday.

Exercise 7: If-Clauses (Type 1)

1. exceeds
2. fails
3. engages
4. rise
5. registers

Exercise 8: If-Clauses (Type 3)

1. had started
2. had lubricated
3. would have been prevented
4. would have tripped
5. had remained

Exercise 9: Infinitives of Purpose

1. The mechanics installed dual damper springs to isolate chassis resonance.
2. Technicians purge the fuel line with dry nitrogen gas to remove residual flammable vapors.
3. We introduced an optical encoder to determine spindle velocity accurately.
4. The developers wrote an automated load testing script to simulate ten thousand concurrent connections.
5. Gold plating is applied to terminal connectors to prevent atmospheric corrosion.

Exercise 10: Gerunds after Prepositions

1. redesigning
2. replacing
3. reducing
4. cleaning
5. filtering

Summary of Lecture Notes – NPTEL Soft Skills Course

NPTEL Summary: Development of Soft Skills and Personality

Week 1: Foundations of Soft Skills and Self-Management

Week 1 explains that soft skills are developed through real-life practice and changes in behavior, not just theoretical learning. It highlights how perception influences relationships and why empathy is essential to understanding others. The week introduces self-management skills such as self-awareness, confidence, emotional balance, stress handling, patience, and spiritual intelligence. It also explores goal-setting through Stephen Covey's principle of "beginning with the end in mind," Maslow's hierarchy of needs, and the importance of developing one's full potential.

Week 2: Conflict Resolution and Stress Management

Week 2 explains that conflicts are a natural part of life and can strengthen relationships when handled constructively. Effective communication, empathy, negotiation, and compromise help people find win-win solutions. It discusses intrapersonal, interpersonal, and intergroup conflicts, emphasizing the importance of understanding needs rather than insisting on personal demands. The week also distinguishes positive stress, which motivates us, from harmful stress, and highlights the importance of exercise, adequate sleep, planning, and relaxation.

Week 3: Habit Formation and Productivity

Week 3 explores how repeated actions become habits that eventually shape our character and influence success. It explains the habit cycle, the role of dopamine in rewards, and the importance of replacing harmful routines with positive ones. The Zeigarnik effect highlights how unfinished tasks can occupy our minds, while simply getting started can help overcome procrastination. Successful people build discipline, focus on important goals, work consistently, and develop productive habits over time.

Week 4: Active Listening and Telephone Etiquette

Week 4 focuses on active listening as an essential communication skill. Listening involves understanding, interpreting, and responding thoughtfully rather than

merely hearing words. Physical distractions, personal biases, and emotional reactions can interfere with effective listening. The week also covers professional telephone etiquette, including speaking clearly, maintaining a polite tone, taking notes, avoiding unnecessary jargon, and handling difficult callers patiently. These skills help build trust and create a professional impression.

Week 5: Technology, Mobile Etiquette, and Netiquette

Week 5 examines how excessive dependence on technology can weaken real-life relationships. It introduces concepts such as the “cyborg” and “moborg” to describe the growing connection between humans and machines, along with nomophobia, or the fear of being without a mobile phone. Learners are encouraged to use technology responsibly, limit unnecessary phone use, and respect others during face-to-face interactions. The week also emphasizes professional digital communication through proper email structure, correct grammar, respectful language, and responsible internet etiquette.

Week 6: Communication Process and Barriers

Week 6 explains that effective communication means delivering a message clearly and achieving the intended response. Harold Lasswell’s model explores who communicates what, to whom, through which channel, and with what effect. Communication can fail because of misunderstandings, emotional interference, differences in perception, or organizational barriers. Choosing the right communication method, simplifying messages, encouraging trust, and checking whether the message is understood can improve communication. The week also introduces non-verbal communication and common misconceptions about body language.

Week 7: Non-Verbal Communication and Professional Behavior

Week 7 explores how body language, facial expressions, eye contact, gestures, posture, personal space, and tone of voice influence communication. Non-verbal cues can support or contradict spoken words, but they must be interpreted in context because culture and circumstances affect their meaning. The three Cs—context, clusters of gestures, and changes from a person’s usual behavior—help improve interpretation. The week also discusses professional behavior in

interviews and group discussions, encouraging confidence, punctuality, attentive listening, positive expressions, and composed body language.

Week 8: Presentation Skills, Reading, and Ethics

Week 8 focuses on public speaking, effective reading, and professional ethics. Presentation anxiety can be managed through preparation, practice, positive thinking, and familiarity with the audience and venue. Good presentations use clear language, a few main points, engaging examples, and well-designed visual aids. The week also introduces reading techniques such as skimming for main ideas, scanning for specific information, and close reading for deeper understanding. Finally, it emphasizes that integrity, trust, respect, and treating others fairly are essential for lasting personal and professional success.

Conclusion

The eight weeks collectively show that personality development is a continuous process involving self-awareness, discipline, effective communication, emotional balance, and ethical behavior. Technical knowledge alone is not enough to succeed; the ability to understand people, manage challenges, build positive habits, and behave responsibly is equally important. Practising these skills in everyday life helps individuals grow personally and become more confident and effective professionals.

Project Proposal – Ideation & Technical Abstract

Biometric Voting System Using Fingerprint Authentication

Project Theme: One Verified Voter, One Secure Vote

1. Introduction

Voting is an essential part of democracy, allowing citizens to elect their representatives. A reliable voting system must ensure voter eligibility, prevent duplicate voting, and protect ballot secrecy.

The proposed Biometric Voting System uses fingerprint authentication to verify registered voters before allowing them to vote. It combines biometric technology, secure databases, and cybersecurity to strengthen voter verification.

An additional feature explores voting at authorized centres outside a voter's registered region, improving accessibility for eligible voters who are temporarily away from home.

2. Problem Statement

Ensuring voter authenticity, preventing duplicate voting, and maintaining secure election records are important challenges in election management. Manual verification may involve additional administrative effort, while voters away from their registered locations may face travel difficulties.

Problem Statement: How can fingerprint authentication and secure databases strengthen voter verification, prevent duplicate voting, protect ballot secrecy, and improve accessibility for eligible voters?

3. Aim of the Project

The aim is to develop a prototype of a biometric voting system that uses fingerprint authentication and database verification to reduce the risk of unauthorized and duplicate voting.

The project also explores authorized out-of-region voting and the potential integration of AI for identifying suspicious system activity.

4. Objectives of the Project

- Voter Authentication: Verify voter identity using fingerprint recognition.
- Eligibility Verification: Confirm voter eligibility through authorized records.
- Duplicate-Vote Prevention: Block additional voting attempts after a ballot is accepted.
- Secure Vote Recording: Protect ballot secrecy and maintain accurate records.
- Data Security: Protect biometric and voting information using encryption and access controls.
- Improved Accessibility: Explore voting at authorized centres outside the registered region.
- AI Integration: Investigate AI-assisted detection of unusual system activity.
- System Monitoring: Maintain audit logs for authorized review.

5. Proposed System and How It Works

5.1 Voter Registration

Eligible voters are registered through an authorized process. Their required details and protected biometric templates are stored securely.

5.2 Fingerprint Authentication

The voter places their finger on a biometric scanner. The system compares the captured fingerprint with the registered template to verify identity.

5.3 Eligibility and Voting-Status Verification

The system checks the voter's eligibility and whether they have already voted in the relevant election. Duplicate voting attempts are blocked.

5.4 Secure Vote Casting

Verified voters access the ballot interface and select their preferred candidate. The system separates voter identity from ballot choices to preserve secrecy.

5.5 Vote Recording and Confirmation

After accepting the ballot, the system updates the voter's voting status and provides confirmation without revealing the selected candidate.

5.6 Authorized Out-of-Region Voting

Eligible voters could potentially vote at approved centres outside their registered region. This requires secure coordination between centres, correct constituency-based ballots, and election-authority approval.

6. Main Features of the System

6.1 Fingerprint Authentication

Verifies voter identity by matching fingerprints with registered biometric templates.

6.2 Secure Voter Database

Maintains voter details, eligibility information, and election-specific voting status with restricted access.

6.3 Duplicate-Vote Prevention

Checks voting records and blocks a second accepted ballot from the same voter in the same election.

6.4 Authorized Multi-Location Voting

Explores voting at approved centres outside a voter's registered region, subject to election rules.

6.5 Data Security and Privacy

Uses encryption, access controls, and secure records to protect sensitive information and ballot secrecy.

6.6 Administrative Dashboard

Displays system status, participation statistics, and relevant operational information to authorized administrators.

6.7 AI-Assisted Anomaly Detection

Explores AI to flag unusual authentication patterns or suspicious activity for human review.

7. Expected Impact and Benefits

7.1 Improved Voter Authentication

Fingerprint verification adds an additional layer of identity checking.

7.2 Reduced Risk of Duplicate Voting

Database checks help prevent multiple accepted ballots from the same voter.

7.3 Improved Accessibility

Authorized multi-location voting could reduce travel difficulties for eligible voters away from their registered constituencies.

7.4 Increased Accountability

Audit logs help authorized officials review system activity and investigate irregularities.

7.5 Protection of Voter Privacy

Separating voter identity from ballot records helps protect the secrecy of individual votes.

7.6 Technological Innovation

The project combines biometrics, databases, cybersecurity, and potential AI applications.

7.7 Foundation for Future Research

The prototype supports further research into secure authentication, privacy, and accessible voting systems.

8. Security, Privacy, and Limitations

Fingerprint systems may produce incorrect matches, and biometric databases can be vulnerable to cyberattacks. The system must therefore protect biometric templates, encrypt sensitive data, restrict access, and provide alternative verification methods.

Ballot secrecy and independent verification must remain essential design requirements. AI should support human review rather than independently determine voter eligibility.

The prototype is intended for educational purposes. Real-world implementation would require compliance with applicable election laws, election-authority approval, and independent security testing.

9. Conclusion

The proposed Biometric Voting System explores how fingerprint authentication and secure databases can strengthen voter verification and reduce duplicate voting.

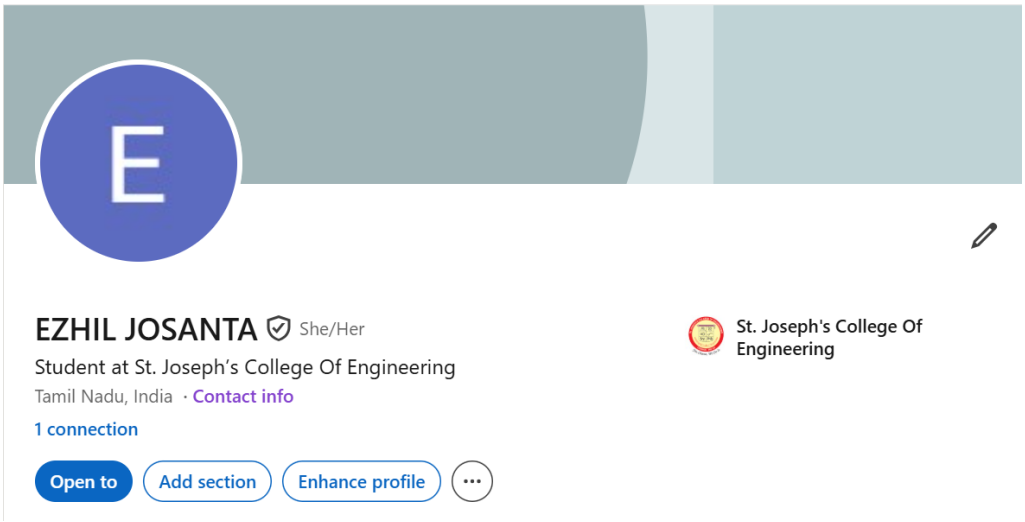

Its additional features, including authorized multi-location voting and AI-assisted anomaly detection, offer opportunities for future development. However, security, privacy, accessibility, and legal compliance must be carefully addressed.

The project aims to demonstrate a practical prototype that supports secure voter verification while identifying opportunities for improvement.

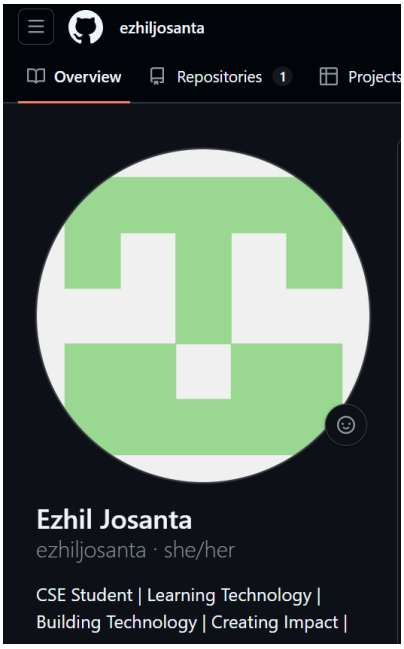

Project Vision: One verified voter, one secure vote — with greater accessibility, stronger privacy, and greater trust in the voting process.

Cambridge portal

CREATE YOUR STORY AND CHECK YOUR CEFR LEVEL

Once a brother and his sister had a conversation about AI and its possibility of replacing humans. Rohan looked at his phone and sighed. “The AI made my whole presentation in one minute. What do people even do now ? ”. So ,his sister Meera sat beside him and said, “Remember when Dad’s scooter broke in the rain? We pushed it home together.” . “Yes! I cried all the way.”,replied Rohan .“And Dad sang silly songs to make us laugh,” she said. “An AI could write better songs. But it wasn’t wet and tired with us. It didn’t care if we got sick.” . Rohan smiled a little.“AI can write your presentation,” Meera said. “But when you stand in front of people. You feel nervous. You care. That is what makes us human.” .After hearing this, he put his phone down. And finally Rohan accepts that AI can never replace humans entirely.
