Student Name: Fredin.R

Roll No: 26CS1160

Date:

Subject Name: Professional English Lab Integrated

DEPARTMENT OF HUMANITIES & SCIENCES | AFFILIATED TO ANNA UNIVERSITY | CHENNAI

2026 | STUDENT PORTFOLIO

Fredin.R

Computer Science Engineering Student

ASPIRING SOFTWARE DEVELOPER
C Programming | Algorithms | Practical Projects

BUILDING STRONG FOUNDATIONS FOR SOFTWARE DEVELOPMENT

Focused on C programming, logical problem solving, digital logic and practical projects that turn real-world ideas into software.

CAREER DIRECTION
Software & Application Development

ACADEMIC PROGRAM
B.Tech Computer Science & Engineering | 2026-Present

LEARNING PRIORITIES
C | Data structures & algorithms | GitHub | Application development

“Learn the fundamentals. Build consistently. Turn curiosity into useful technology.”

Contents & Index

Professional English Lab Integrated | Student edition | 2026

College lab-record cover	**1**
Personal student cover	**2**
Contents & index	**3**
Original personal profile, SWOC & projects	**4-16**
Expanded NPTEL study notes - Weeks 1-7, Lectures 1-7	**17-23**
Completed common vocabulary worksheets (22)	**24-45**
Personalised worksheet application examples	**46-47**

Editorial note: The original individual profile, project and self-assessment pages are preserved. The common NPTEL lecture notes have been expanded, existing answered worksheets retained with black underlined answers, and personalised applications added. Only repeated lecture summaries and an incorrectly attributed reference score were excluded.

01

Profile & Career Direction

Academic foundation, learning style, objectives and long-term vision.

I am a first-year B.Tech Computer Science and Engineering student at St. Joseph's College of Engineering. I enjoy understanding systems from first principles and breaking complex problems into smaller parts. My focus is C programming, algorithms, digital logic and practical software development.

PROFILE

I enjoy learning by building and exploring how technology can solve practical problems.

CAREER OBJECTIVE

Build strong programming fundamentals and turn practical ideas into useful software through projects and hackathons.

CAREER VISION

Become a capable software developer, with a long-term goal of working in a major technology company.

HOW I WANT TO GROW

Build progressively harder projects, document my work, learn from communities and develop a strong portfolio.

LEARNING METHOD

Ask questions, connect ideas, understand the mechanism, apply it and reflect on what to improve.

EDUCATION	DETAILS
Program	B.Tech Computer Science and Engineering
College	St. Joseph's College of Engineering
Academic term	2026-Present | First Year
Coursework	SWAYAM: Fundamentals of Computing

02

Technical Skills & Communication

What I am using now, what I am learning and how communication supports my growth.

AREA	CURRENT FOUNDATION / LEARNING FOCUS
Programming	C fundamentals; structs and recursion in progress; Python basics requiring renewed practice.
Computer science	Digital logic, logic gates, adders, latches and basic computer architecture.
Hardware / embedded	Arduino basics, LED interfacing and basic circuit concepts.
Application development	Learning student/warden workflows, report tracking and status management.
Engineering workflow	Git, debugging, clean code, documentation and collaboration.
Future exploration	Data structures, algorithms and complete application development.

PROFESSIONAL SKILLS

Communication | Teamwork | Problem solving | Time management | Presentation | Continuous learning

ENGLISH PRACTICE | SPEAK & IMPROVE / WRITE & IMPROVE

SPEAKING SUMMARY

Practise clear, organized responses, useful examples, steady pacing and confident delivery.

WRITING SUMMARY

Answer the prompt, organize ideas, review grammar and word choice, then revise using feedback.

COMMUNICATION PRACTICE

For speaking, plan a clear point, one example and a short conclusion. For writing, organize ideas before drafting and revise once for meaning, then once for language.

Personal scores and individual feedback were not included in the supplied profile files, so this section records development priorities rather than test results.

EN

English Language Assessment Results

Speak & Improve and SwiftRead | Recorded assessment results

SPEAK & IMPROVE | READ ALOUD

CEFR LEVEL

B1

Read aloud #1

Checked: 21 October 2026 at 21:43

The speaking assessment recorded CEFR B1 for the completed read-aloud task.

SPEAK & IMPROVE | ASSESSMENT HISTORY

READ-ALOUD TASK RESULTS

B1 / B1 / B1

Tasks 1, 2 and 3 each show B1 on the assessment history page. History captured on 21 October 2026 at 22:03.

SWIFTREAD | READING SPEED AND COMPREHENSION

299 WPM

Reading speed

75%

Reading comprehension

Recorded tests: 1

Reading time: 1.2 minutes

Passage: 9199

Taken: 21 October 2026, 21:20

The reading test recorded an average speed of 299 words per minute and 75% correct answers on comprehension questions.

RESULTS RECORD

These figures reproduce the supplied English test results as text. They describe individual assessment results, not a combined English proficiency grade.

03

Software Development Roadmap
A four-year development path with skill priorities and practical milestones.

STAGE	FOCUS	PRACTICAL MILESTONE
YEAR 1	Strengthen C, programming foundations and basic data structures.	Build a small application and establish consistent practice.
YEAR 2	Applications, DSA, communication and leadership.	Build multiple applications and begin internship preparation.
YEAR 3	Advanced problem solving and industry exposure.	Build stronger projects and seek internship experience.
YEAR 4	Career readiness. Prepare a strong portfolio and software-development applications.	

01 | FOUNDATION
C | Structs | Recursion | Basic data structures

02 | APPLICATIONS
UI | Data management | Report workflows

03 | PROBLEM SOLVING
Algorithms | LeetCode | Debugging | Testing

04 | CAREER READINESS
Projects | Internships | Communication | Portfolio

PROOF OF WORK
Document the problem, approach, implementation, results and learning. Finish small projects before increasing complexity.

SEMESTER CHECKPOINTS

CHECKPOINT	REVIEW QUESTION
Foundations	Can I explain the code and solve a similar problem without copying?
Application	Are the workflows implemented, tested and documented?
Consistency	Can I maintain smaller, repeatable coding sessions?
Portfolio	Does each entry state the problem, my contribution and what I learned?

04

Technical Development Framework

A progression from core knowledge to work that can be demonstrated and reviewed.

01 | FOUNDATIONS
Programming | Data structures | Problem solving

02 | LOGIC
Digital logic | State representation | System decomposition

03 | APPLICATIONS
UI | Data management | Student/warden workflows

04 | DELIVERY
Testing | GitHub | Documentation | Completion

CAPABILITY-TO-EVIDENCE MATRIX

TRACK	CURRENT BASIS	NEXT EVIDENCE TO DEVELOP	QUALITY CHECK
Programming	C developing; Python basics.	Small, readable programs with clear GitHub notes.	Correctness and clarity.
Digital logic	Adders, latches and memory concepts.	Document the 8-bit adder and latch-memory experiments.	Explain logic and test behavior.
Applications	Hostel reporting concept; complete-app skills developing.	Build a small reporting application from beginning to end.	Input checks and useful documentation.
Algorithms & DSA	Developing foundations. Practice structs, recursion and basic DSA. Explain why each solution works.		

PORTFOLIO STANDARD
For each future project, document the problem, design choices, implementation, validation and lessons learned. This keeps evidence aligned with what has actually been built.

REPEATABLE BUILD CYCLE

DEFINE
Set the problem, scope and success condition.

DESIGN
Sketch the data flow, components and assumptions.

BUILD
Implement in small steps and use version control.

REVIEW
Test, document limitations and record next improvements.

05

GitHub, LinkedIn & Practical Learning

A build-first approach supported by clear documentation and professional communication.

My GitHub profile documents my first-year CSE learning journey. I am strengthening C programming, algorithms and problem solving while building practical projects such as a 2D Rubik's Cube model and developing a hostel-reporting application concept.

GITHUB README

Hi, I'm Fredin.R. A first-year B.Tech CSE student learning C programming, application development and problem solving.

PRACTICAL APPROACH

Practise clean code, debugging, documentation and collaborative workflows.

CURRENT FOCUS

C structs, recursion, data structures, algorithms and application development.

PROFESSIONAL PROFILE

Use clear project descriptions and a concise LinkedIn summary to communicate goals and learning.

PROFILE LINKS

GitHub: github.com/joya-l

LinkedIn: linkedin.com/in/gabrin-r-aron-810676391

Location shown on LinkedIn: Kanniyakumari, Tamil Nadu, India

PROFILE IMPROVEMENT CHECKLIST

Use a clear headline, a concise About paragraph, consistent education details, and project entries that distinguish completed work from current learning. Add a custom banner and profile photo when ready.

The supplied LinkedIn export was incomplete. The profile summary and headline in this portfolio are drafted from the résumé, not copied from a completed LinkedIn About section.

P1

Hostel Reporting Application

Project concept | Report hostel issues and track resolution

HOSTEL ISSUE TRACKER
REPORTS | STATUS | STUDENT CONFIRMATION

A software concept for reporting hostel water, electricity, Wi-Fi and furniture problems.

WHY THE PROBLEM IS DIFFICULT

Reports need clear status tracking and coordination between students and wardens. A fix should be confirmed before an issue is closed.

PROJECT GOAL

Let students report problems, help wardens manage them, and require student confirmation before marking a report solved.

What the system is designed to do

REPORT

Students submit water, electricity, Wi-Fi or furniture issues.

HANDLE

Wardens review reports and coordinate action.

TRACK

Maintain issue status throughout the resolution workflow.

CONFIRM

Students confirm resolution before a report is marked solved.

Scope note: This is a developing concept for hackathon preparation, not a claim of a completed application.

06

SWOT Analysis & Gap-Closing Plan

A forward-looking self-assessment based on my current stage of study and documented learning direction.

STRENGTHS	DEVELOPMENT AREAS
? Logical thinking and problem solving ? Curiosity, creativity and system decomposition ? Self-reflection and understanding mechanisms	? C foundation, structs and dynamic programming need work ? Limited complete-application experience ? Consistency and project-completion habits need development
OPPORTUNITIES	**RISKS TO MANAGE**
? Hackathons and practical college projects ? ByteXL, LeetCode and GitHub portfolio development ? Internships and application-development experience	? Digital distractions and time-management gaps ? Curiosity drift and increasing project complexity ? Strong competition and rapid technology change

PRIORITY DEVELOPMENT PLAN

PRIORITY	PROFESSIONAL ACTION	EVIDENCE OF PROGRESS
Programming fundamentals	Practise C and Python through coursework-aligned exercises; review errors and keep concise notes.	Completed exercises with readable code and brief explanations.
Structs and algorithms	Learn structs through small programs; progress from recursion to memoization and tabulation.	Small explained programs and tested solutions.
Project execution	Choose one manageable problem; define scope, build incrementally, test and document decisions.	A complete repository with setup steps, screenshots or examples, and known limitations.
Consistent execution	Use short repeatable coding sessions; finish a small application before expanding its scope.	Completed milestones and regular practice notes.

REVIEW STANDARD

At the end of each term, review completed coursework, code and project documentation. Update this assessment only when there is new evidence; select the next learning priority based on demonstrated progress and available time.

SWOT PRESENTATION SPEECH

As a first-year B.Tech CSE student, my strengths are logical problem solving, curiosity, creativity and breaking systems into smaller parts. My C skills, structs, dynamic programming and complete-application experience are still developing. I will strengthen fundamentals, use small repeatable coding sessions and complete a manageable hostel-reporting application. Hackathons, LeetCode, GitHub and internships offer ways to learn through practice. I need to control distractions and project complexity, finish current goals, and gradually increase difficulty.

07

The Person Who Inspires Me

Darshil Parmar and the kind of Data Engineer I hope to become.

PERSON
Darshil Parmar

KNOWN FOR
Data engineering, practical projects and educational content

Darshil Parmar works across data engineering, data warehousing, machine learning and business intelligence, and shares what he learns through his YouTube channel. The reference portfolio highlights his work associated with Apache Airflow and Apache Superset, connecting workflow automation with data exploration and visualization.

WHAT I ADMIRE

His combination of practical engineering and teaching shows how technical work can solve problems and how clear explanations can help others learn.

HOW THIS SHAPES MY GOALS

- Strengthen programming, SQL, databases and data structures first.
- Learn through practical projects and explain the decisions behind them.
- Explore cloud platforms and data engineering as my skills develop.
- Work toward designing reliable data solutions that are useful to others.

TECHNICAL LESSONS

SYSTEMS THINKING
Understand how data is collected, transformed and delivered.

RELIABILITY
Make workflows repeatable and explain how they behave when inputs fail.

OPEN LEARNING
Share useful explanations and project decisions with others.

CAREER APPLICATION
Build foundations first, then progress toward cloud data systems.

Profile source: darshilparmar.com/about

08

Professional Development & Portfolio Summary

Technical growth supported by communication, consistency and proof of work.

COMMUNICATION & TEAMWORK
Develop clear communication, presentation skills and collaboration.

PROBLEM SOLVING
Build persistence, debugging habits and adaptability.

CONTINUOUS LEARNING
Use coursework, documentation, communities and projects to keep improving.

TIME MANAGEMENT
Balance academic responsibilities with regular technical practice.

CURRENT PROOF OF WORK

B.Tech CSE | 2D Rubik's Cube model in C | 8-bit full-adder and latch-memory experiments | GitHub: joya-l | Hostel-reporting application concept.

NEXT DIRECTION

Strengthen C, structs, recursion and basic DSA. Complete a small application, practise algorithms and develop project documentation, communication and internship readiness.

CO-CURRICULAR DEVELOPMENT

Technical projects, hackathons, GitHub learning, professional networking and technical presentations are relevant ways to connect academic learning with practical experience. Participation and outcomes should be added as they are completed.

09

Professional Pitching

Personal introduction - speaking script only.

?Good morning. I am Fredin.R, a first-year B.Tech Computer Science and Engineering student at St. Joseph's College of Engineering. I enjoy understanding how systems work and breaking complex problems into smaller logical parts. I am strengthening C programming, algorithms, digital logic and problem solving. My practical work includes a 2D Rubik's Cube model in C, an 8-bit full adder and latch-based memory experiments. I am also developing a hostel-reporting application concept for hackathon preparation. My strengths are curiosity, creativity and logical thinking. I want to improve consistency, structs and complete-application development through smaller projects and regular practice. My goal is to become a software developer who can understand a real problem, design a solution, build it, debug it and explain it clearly. Thank you.?

PITCH STRUCTURE

INTRODUCE
Name, degree and current academic stage.

ESTABLISH
Core foundations and how I learn.

FOCUS
Current interests and what I am practising now.

CLOSE
The contribution and direction I am working toward.

DELIVERY NOTES

- Speak at a measured pace and pause between ideas.
- Use a natural tone and look up from notes.
- Emphasize what I am learning now and the direction I am pursuing.

These activities connect grammar with conversation. Learners practise describing completed events, asking questions about past experiences and explaining routines that were common earlier but are different now. Repeating these patterns helps connect verb forms and word choice to meaning.

WHAT THE ACTIVITIES DEVELOP

PAST EXPERIENCES
Describe when an event happened, what took place and who was involved.

EARLIER ROUTINES
Explain what someone did regularly before and how the routine changed.

QUESTIONS & RESPONSES
Practise asking follow-up questions and giving positive or negative answers.

VOCABULARY & ACCURACY
Use familiar verbs and sentence patterns to make the meaning clear.

SAMPLE LANGUAGE PATTERNS

PURPOSE	EXAMPLE	DETAIL TO ADD
Past event	I visited my grandparents last summer.	When? Where? What happened?
Follow-up question	What did you do there?	Ask for one specific detail.
Earlier routine	I used to read before bed.	Explain what is different now.

PRACTICE PROMPTS

- Describe a memorable first day at college and one thing you remember clearly.
- Talk about a hobby or routine you had as a child; explain whether it changed.
- Ask a partner about an experience from last year, then ask one follow-up question.

OVERALL TAKEAWAY

Grammar supports real communication. Organizing a response around when, where, what happened and what changed can make memories and past routines easier to describe clearly.

Summary adapted from the Interchange activity section in the first reference PDF.

The earlier portfolio includes workplace vocabulary practice across business and professional communication topics. This summary records the transferable learning focus without importing another student's personal results.

WHAT THE EXERCISES DEVELOP

WORK AND EMPLOYMENT VOCABULARY
Terms for roles, recruitment, working arrangements, responsibilities and compensation help make workplace discussions more precise.
MEANING FROM CONTEXT
Fill-in-the-blank and matching activities encourage checking how a term is used in a sentence, rather than relying only on memorized definitions.
GRAMMAR AND ACCURACY
Sentence correction draws attention to prepositions, verb forms and clear sentence structure in professional communication.
BUSINESS CONCEPTS
Topics such as marketing, finance, leadership, meetings, negotiation and time management connect vocabulary with common workplace situations.

MY NEXT STEPS

PRACTICE PLAN
Review unfamiliar terms, write original example sentences and revisit words that are easy to confuse.
USE IN CONTEXT
Apply suitable vocabulary in coursework, presentations, emails and conversations, checking that the word fits the intended meaning.
OVERALL FOCUS
Build clearer English and professional confidence through regular revision and practical use.

This learning summary describes the worksheet topics; it is not a personal score report or a claim that every worksheet has been completed.

Week 1 - Lecture 1 | Introduction 1: Highlights of Developing Soft Skills

Course: Enhancing Soft Skills and Personality (IIT Kanpur, Prof. T. Ravichandran). These are expanded study notes derived from the lecture themes in the uploaded portfolios, not proof of course completion.

Concept explained

Soft skills influence how knowledge becomes useful in daily life. Communication, listening, responsibility and the ability to work with other people affect both study and employment. The introductory session connects these habits with individual character and the decision to improve deliberately.

Why this matters

Technical ability is not enough on its own. An accurate explanation of a solution, an honest response to criticism, and a calm conversation in a team are also evidence of professional growth.

My understanding

The lecture showed me that knowing a rule and consistently following it are two different things.

Connection to my own studies

I want to work toward data engineering, so I need to explain technical decisions in understandable language. For example, when presenting the Smart Plant Care Reminder project idea, I should describe the problem, my method and what I learned.

Practical action: Notice how I respond when someone disagrees with an idea; practise listening first and summarising their point before answering.

Week 2 - Lecture 2 | Introduction 2: Further Highlights of Developing Soft Skills

Course: Enhancing Soft Skills and Personality (IIT Kanpur, Prof. T. Ravichandran). These are expanded study notes derived from the lecture themes in the uploaded portfolios, not proof of course completion.

Concept explained

The second introductory lecture builds on personal development. It places attention on self-awareness, preparation, ethical conduct, listening, communication and the willingness to examine one's own behaviour. Progress is more realistic when a person observes habits instead of relying only on good intentions.

Why this matters

A conversation has a purpose, an audience and an expected result. Choosing precise words and checking understanding makes both presentations and everyday teamwork more effective.

My understanding

I would describe the principle through the choices I make each day, rather than through a single examination result.

Connection to my own studies

As I strengthen C, Python, SQL and databases, I can practise concise presentations and active listening. A good team discussion should leave everyone knowing the next action, not merely the words that were spoken.

Practical action: After one class discussion, write down what I explained clearly, what confused others, and one small adjustment for next time.

Week 3 - Lecture 3 | Mindset 1: Definition and Types

Course: Enhancing Soft Skills and Personality (IIT Kanpur, Prof. T. Ravichandran). These are expanded study notes derived from the lecture themes in the uploaded portfolios, not proof of course completion.

Concept explained

A mindset refers to the beliefs and assumptions through which a person interprets experiences. A positive outlook encourages effort, but an unexamined negative assumption can discourage action before a problem is even attempted. Mindsets influence reactions to success, mistakes, advice and unfamiliar situations.

Why this matters

Recognising a limiting belief is different from pretending difficulties do not exist. I can acknowledge that a topic is challenging and still choose to attempt a smaller, achievable step.

My understanding

The material encouraged me to work deliberately, review my behaviour and make one measurable adjustment at a time.

Connection to my own studies

When progress on the Smart Plant Care Reminder project idea is slow, I should question the assumption that a first attempt must be perfect. Breaking a complex problem into smaller parts makes the challenge easier to investigate.

Practical action: Identify one sentence I use when a task feels hard, then rewrite it as a realistic statement about a skill I can practise.

Week 4 - Lecture 4 | Mindset 2: Learning Mindsets

Course: Enhancing Soft Skills and Personality (IIT Kanpur, Prof. T. Ravichandran). These are expanded study notes derived from the lecture themes in the uploaded portfolios, not proof of course completion.

Concept explained

The learning-mindset lecture distinguishes responses that close off improvement from responses that welcome it. A fixed outlook may treat errors as proof of inability; a growth-oriented approach treats them as feedback about a method, strategy or level of preparation.

Why this matters

Progress in a difficult subject usually requires several attempts, good feedback and corrections. This does not guarantee immediate success, but it encourages sustained, thoughtful practice.

My understanding

I understood the central message as a reminder to turn an idea into a habit, not simply memorise a definition.

Connection to my own studies

If I cannot solve a task using C, Python, SQL and databases immediately, I will experiment with examples, read feedback carefully and retry. The main evidence of improvement is a better method after each attempt.

Practical action: When an exercise fails, record the cause, try a second method, and describe what changed rather than merely recording a wrong answer.

Week 5 - Lecture 5 | Mindset 3: Secrets of Developing Growth Mindsets

Course: Enhancing Soft Skills and Personality (IIT Kanpur, Prof. T. Ravichandran). These are expanded study notes derived from the lecture themes in the uploaded portfolios, not proof of course completion.

Concept explained

This session focuses on building a growth mindset through purposeful effort, reflection and practical goals. Improvement becomes more visible when long ambitions are divided into small tasks and when feedback is used to modify the approach rather than judge personal worth.

Why this matters

The word “yet” helps reframe an unfinished skill, but a useful growth mindset also requires evidence: repeated practice, specific study methods and honest review of results.

My understanding

The main lesson for me is that a useful skill appears in ordinary actions, especially when circumstances become demanding.

Connection to my own studies

My plan to develop in data engineering benefits from frequent practice. I can track a practical target, such as solving a set of small coding problems or improving one feature in the Smart Plant Care Reminder project idea.

Practical action: Set one weekly skill goal, complete three practice attempts and compare the final attempt with the first.

Week 6 - Lecture 6 | Managing Time 1: Importance and Perceptions of Time

Course: Enhancing Soft Skills and Personality (IIT Kanpur, Prof. T. Ravichandran). These are expanded study notes derived from the lecture themes in the uploaded portfolios, not proof of course completion.

Concept explained

Time is limited, and different activities compete for it. This lecture asks learners to consider how they perceive time and where their hours go. Without first observing real habits, a timetable may become unrealistic or fail to account for interruptions.

Why this matters

Time management starts with awareness. Planning can balance urgent work, long-term learning, breaks and responsibilities while leaving room to adjust when a task takes longer than expected.

My understanding

This discussion made me compare the way I think about a challenge with the steps I actually take to solve it.

Connection to my own studies

When juggling classes and C, Python, SQL and databases, I need an honest picture of my schedule. I can compare planned study time with what I actually use, then adjust without removing necessary rest.

Practical action: Record one study day in half-hour blocks, identify avoidable delays and reserve a fixed period for a priority task.

Week 7 - Lecture 7 | Managing Time 2: Using Time Efficiently

Course: Enhancing Soft Skills and Personality (IIT Kanpur, Prof. T. Ravichandran). These are expanded study notes derived from the lecture themes in the uploaded portfolios, not proof of course completion.

Concept explained

Efficient time use means selecting priorities, estimating effort and limiting distractions. Working for many hours is not the same as producing good work. Concentrated sessions, realistic deadlines and checking completed tasks can improve the use of available time.

Why this matters

A short task list works best when it names a concrete output rather than an unclear intention. Reviewing progress also reveals which tasks repeatedly need more time.

My understanding

I can relate this topic to preparing for a technical career while still developing my fundamentals.

Connection to my own studies

To make steady progress toward data engineering, I should rank important tasks, avoid constant switching and set a visible result for each study session, such as a tested function or a written explanation.

Practical action: Choose three tasks for tomorrow, estimate minutes for each, finish the most important one early and review actual times.

VOCABULARY WORK SHEET

Part A: Fill in the Blanks

Complete the sentences using the correct terms from Units 1, 2, and 3.

1. To find out what someone's job is, you usually ask, "What do you do?"
2. A manager who oversees a team and ensures targets are met is often said to be in charge of the department.
3. Employees who work outside standard office hours in rotation (e.g., one week morning, next week evening) are working in shifts.
4. Outside specialists hired by companies to persuade top executives to leave their current firms are known as headhunters.
5. Job applicants typically submit a CV (curriculum vitae) detailing the story of their working life alongside a covering letter.

Part B: Matching Terms to Definitions

Match each business term on the left with its correct description on the right.

1. B_____ Flexitime
2. C_____ Teleworking
3. E_____ Psychometric test
4. D_____ Shortlist
5. A_____ Referees

- **A.** Previous employers or teachers named to provide character or performance references.
- **B.** A system allowing employees to choose working hours within agreed limits.
- **C.** Working from home using a computer and telecommunications.
- **D.** A selected pool of qualified candidates chosen for final interviews.
- **E.** A written test used to assess a candidate's intelligence and personality.

Part C: Sentence Correction

Identify and correct the errors in the following sentences.

1. *Error:* "I am in charge for the design department." → *Correction:* I am in charge of the design department.

Vocabulary in My Own Words

The worksheet answers in the following section are retained. These additional examples connect the common units to my own interests, using different sentences instead of repeating a generic model response.

01. Jobs, CVs, references and recruitment

I could use these expressions to describe professional responsibilities related to data engineering.

02. Employment terms, salaries and benefits

When explaining C, Python, SQL and databases, I can replace vague phrases with accurate terms from this unit.

03. Offices, equality and occupational safety

I would practise this language when planning and presenting the Smart Plant Care Reminder project idea.

04. Management roles, entrepreneurs and company culture

These words connect business communication with my goal of working in data engineering.

05. Business sectors, public companies and product launches

I can practise a short example based on the Smart Plant Care Reminder project idea, then revise it for clarity.

06. Production, patents and research

The unit gives me a clearer way to communicate progress, problems and next steps in data engineering.

07. Service quality, benchmarking and market competition

This vocabulary would help me discuss the Smart Plant Care Reminder project idea while working with classmates.

08. Marketing, brands and market research

I could use these expressions to describe professional responsibilities related to data engineering.

09. Retailing, franchising and consumers

When explaining C, Python, SQL and databases, I can replace vague phrases with accurate terms from this unit.

10. Meetings, reports and presentations

I would practise this language when planning and presenting the Smart Plant Care Reminder project idea.

11. Sales communication and product launches

These words connect business communication with my goal of working in data engineering.

Vocabulary in My Own Words

The worksheet answers in the following section are retained. These additional examples connect the common units to my own interests, using different sentences instead of repeating a generic model response.

12. Commercial law, contracts and disputes

I can practise a short example based on the Smart Plant Care Reminder project idea, then revise it for clarity.

13. Shares, investment and stock markets

The unit gives me a clearer way to communicate progress, problems and next steps in data engineering.

14. The economy, inflation and economic indicators

This vocabulary would help me discuss the Smart Plant Care Reminder project idea while working with classmates.

15. Finance language and banking controls

I could use these expressions to describe professional responsibilities related to data engineering.

16. Projects, budgets and deadlines

When explaining C, Python, SQL and databases, I can replace vague phrases with accurate terms from this unit.

17. Leadership styles and workplace culture

I would practise this language when planning and presenting the Smart Plant Care Reminder project idea.

18. Business etiquette and telephone use

These words connect business communication with my goal of working in data engineering.

19. Names, schedules and professional manners

I can practise a short example based on the Smart Plant Care Reminder project idea, then revise it for clarity.

20. Meeting procedures, agendas and minutes

The unit gives me a clearer way to communicate progress, problems and next steps in data engineering.

21. Negotiating, compromise and consensus

This vocabulary would help me discuss the Smart Plant Care Reminder project idea while working with classmates.

22. Public speaking, presentation skills and bargaining

I could use these expressions to describe professional responsibilities related to data engineering.

Cambridge One | Digital Workbook Progress
